## SYSTEM REQUIREMENTS

❋ Windows XP, 2003, Vista, 2008, or Windows 7.
❋ .Net 3.5 platform
❋ A valid account on Amazon Storage Services 3

GT-DataSafe© is a comprehensive online backup solution enabling everyday PC user to easily backup, restore, access, and share data. GT-DataSafe continuously monitors your selected folders and files, looking for changes, and when a change is detected, it is backed up to an Amazon storage data center of your choice, even while you still have the file open.

Very seldom do companies or individuals fully recover from loss of critical data. GT-DataSafe will backup all your critical data and documents automatically to AS3, and when your data changes it will automatically backs up the changed data.

GT-DataSafe enables you to keep as many versions of your data as you like. You can set GT-DataSafe to discard older versions automatically that you would no longer need, lowering your storage costs. Your data is secured with 192 bit encryption using either a PKCS certificate or a password of your choice.

With GT-DataSafe You do not need to worry about backup media or where to store it, your backups are always online and you can access it from any computer with the right AWS key and password.

GT-DataSafe makes your disaster recovery plan simple, reliable, and affordable.

## Features:

- **Continuous Backup**: You make a change; GT-DataSafe spots it and backs it up instantly and automatically to Amazon Storage Services, even while the file is open.
- **Suspend and Resume Backups**: backups proceed when the system is idle, or at specified schedules.
- **Easy to Use**: No tasks for you to remember, such as uploading changes or initiating backup. Just set it and forget it.
- **Media Free:** No need for CDs, DVDs, Tapes, or External Drives.
- **File Versioning**: Keep as many versions of files as you want.
- **Backup Retention**. Keep your backups for as long as you need them and delete old unwanted backups to minimize storage costs
- **192 Bit Encryption:** Keep your data safe by encrypting it for enhanced security.
- **Manual Backup:** You can just select any file and back it up to Amazon Storage Services.
